

Water supply system

- Water sources
 - 80% ground water from Sava and Danube river banks
 - 20% underground water,
- System capacity 8500 l/sec
- Production 260 000 000 m³/year potable drinking water
- System consist of
 - 150 wells,
 - 5 treatment facilities,
 - 3650 km network,
 - 5 hydraulic zones

Sanitary sewer and storm water drainage

- Five independent systems.
 - 40% of system is general,
 - 60% of system is separated.
- No treatment plants
- System capacity
 - 137 000 000 m³/year waste and storm water released into the outfall without treatment
 - 51000 connections, 25% of inhabitants are unconnected
- System consist of
 - 1580 km of network, 37 pumping stations

Power supply system

- Total power supply
- 710 000 consumers
- Equipment power capacity 3 200 MW
- Transmission network 400, 220 KV
- Distribution network 110,35,10 KV
- Covers 123 settlements on 2839 km²

Natural gas supply system

- 6000 connected consumers (district heating power plants, industry, low density housing)
- System capacity 350 000 m³/hour
- System consist of
 - 81 km network, 9 general pressure reduction stations (50/12 bar)

District heating system

- 243 000 connected consumers in high density housing
- Heating equipment power capacity 2 400 MW
- System consist of
 - 14 independent heating systems, 117 heating plants, 500 km network

Communication systems

- Wide variety of services in digital technology
- Telephone services
 - 638 000 connections, 47,8 connections per capita,
- Internet
 - 50 000 users,
- Mobil operators 2
- Cable television networks
